Tooth Pulp Derived MSCs is the Next Big Thing

If you did miss the chance to store your baby's umbilical cord stem cells, worry not because if your child still has his or her baby teeth, or if the child's teeth aren't yet removed, stem cells can be extracted from their dental tooth pulp. Researchers have found the stem cells in a younger tooth tend to be less exposed to environmental damage than adult teeth and can help regenerate new cell growth in other parts of the body. Since the discovery of dental stem cells in tooth pulp nearly 20 years ago, clinical trials has shown promising results and clinical uses of these cells has accelerated around the world.

ALURON elevates the moisture level of the skin and helps to regain as well as strengthens the skin's hydrating ability. It is recommended to prevent the effects of aging of the skin. For enquiries and orders call us at 1800 88 3300.

FDP-2B for Aesthetics & Orthopaedics Treatment

FDP-2B is the next generation of Platelet-Rich Plasma (PRP) derived from blood plasma and contains higher concentrated level of platelets and growth factors (at least four to five times) as compared to whole blood. With a single blood withdrawal, FDP-2B can be used for multiple treatments. As a natural anti-aging approach, FDP-2B is used for skin rejuvenation, targeting collagen tissues within the dermis of our skin. Besides aesthetics, FDP-2B works best for patients with acute and chronic orthopaedics conditions, including muscle, tendon, ligaments, bone, and cartilage injuries.

Post Pregnancy Treatment at Brighton Healthcare

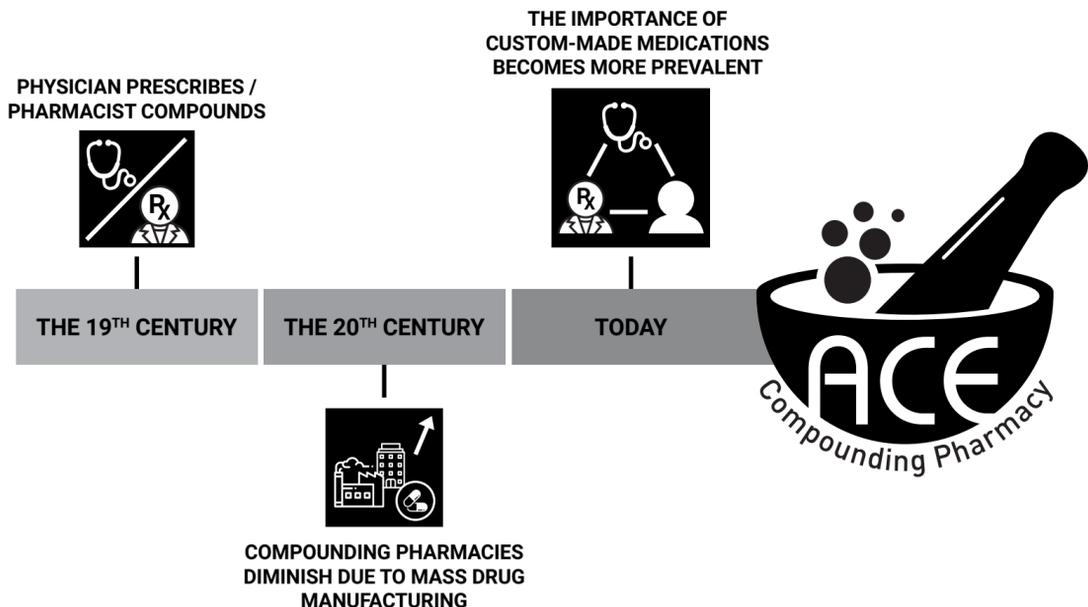

Stretch marks are a common complaint for people who have experienced fast weight gain or pregnancy. Now you can say goodbye to stretch marks with our Fotona Laser Tight Sculpting treatment. Fotona's exclusive dual wave-length modes are used together for fat burning and collagen remodeling, which effectively tightens the skin and reduces stretch marks at the same time. The non-invasive procedure is safe, requires no recovery time as compared to lipolysis and liposuction.

Compounding Pharmacy

In the early 1900's, the majority of all medications were still the result of pharmaceutical compounding. However, as the 20th century progressed, the need for compounding pharmacies diminished due to emerging mass drug manufacturing. Today, the compounding pharmacy industry is making a comeback as the importance of custom-made medications becomes more prevalent. The demand for customized prescription medication and supplement is on the rise as drug manufacturers do not always meet the distinct requirements of each patient. Now, ACE COMPOUNDING is here to provide customized solutions to patient's unique needs. They use only quality assured raw ingredients from MEDISCA, a leading FDA registered supplier of quality pharmacy compounding products. For more information, please contact ACE COMPOUNDING at 03-8688 2228.
